Implementation Notes

- All QR codes are permanent. The printed URLs (/go/*) will never change.
- To update where a QR code redirects: edit src/data/guideQrRedirects.js and redeploy. No QR regeneration needed.
- GA4 event name: qr_scan | Property: G-HZ20D69WMB | Parameters: qr_section, qr_code_id, qr_source, qr_medium, qr_campaign
- The event fires once per session per code. Duplicate events from refreshes are suppressed via sessionStorage.
- Ordinary visitors who navigate directly to the guide sections will NOT trigger qr_scan events.
